EXAMINER

WON, YOUNG N

ART UNIT	PAPER NUMBER
2155	6

DATE MAILED: 06/27/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	Application No.	Applicant(s)
	09/505,385	STAATS, ERIK P.
	Examiner	Art Unit
	Young N Won	2155

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

1) Responsive to communication(s) filed on 30 April 2003.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

4) Claim(s) 1-13 is/are pending in the application.

4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.

5) Claim(s) \_\_\_\_\_ is/are allowed.

6) Claim(s) 1-13 is/are rejected.

7) Claim(s) \_\_\_\_\_ is/are objected to.

8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

11) The proposed drawing correction filed on \_\_\_\_\_ is: a) approved b) disapproved by the Examiner.

If approved, corrected drawings are required in reply to this Office action.

12) The oath or declaration is objected to by the Examiner.

#### Priority under 35 U.S.C. §§ 119 and 120

13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some \* c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).

a)  The translation of the foreign language provisional application has been received.

15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

#### Attachment(s)

1)  Notice of References Cited (PTO-892) 4)  Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.

2)  Notice of Draftsperson's Patent Drawing Review (PTO-948) 5)  Notice of Informal Patent Application (PTO-152)

3)  Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.

6)  Other: \_\_\_\_\_

**DETAILED ACTION**

1. Amended claims 1 and 11 have been entered and examined.
  
2. Claims 2-10, 12, and 13 have been re-examined.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 5-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Takayama (US 5991842 A).

As per claim 5, Takayama teaches a method for establishing transport routing information in an AV/C transaction data delivery system, comprising in combination: detecting a transport (see col.10, lines 9-13); creating a transport ID associated with said transport (see col.5, lines 37-40); notifying a transport layer of said transport ID (see col.4, lines 21-31); indexing said transport ID (see col.8, lines 31-34); associating said indexed transport ID with a device (see col.5, line 63 to col.6, line 3).

As per claim 6, Takayama teaches of further comprising associating said transport with a link device (see col.4, lines 3-4).

As per claim 7, Takayama teaches of further comprising creating a data record for each detected transport and storing the transport ID in association with said transport (see col.5, line 63 to col.6, line 3).

As per claim 8, Takayama teaches of further comprising notifying said transport layer of said data record (see col.4, lines 21-22).

As per claim 9, Takayama teaches a method for sending AV/C transaction data in an AV/C transaction data delivery system (see col.6, line 47), comprising in combination: receiving AV/C transaction data for transport (see col.7, lines 8-15); associating said AV/C transaction data with a transport ID (see col.5, line 63 to col.6, line 3); providing said AV/C transaction data and transport ID to a transport layer (see col.4, line 23-31); associating said transport ID with a transport controller bus ID (see

col.4, lines 23-29); and providing said AV/C transaction data to a transport controller data record associated with said bus ID (see col.7, lines 46-50 & lines 52-62).

As per claim 10, Takayama teaches of further comprising executing appropriate routines to transport said AV/C transaction data over the specified transport (see Fig.11).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takayama (US 5991842 A).

As per claim 1, Takayama teaches of an AV/C transaction data delivery system (see title), comprising in combination: a transport controllers (see Fig.7, #6 and col.7, lines 44-50); an AV/C transport layer in operative communication with said transport controllers (see Fig.7; col.3, lines 62-67; and col.7, lines 5-7); and an AV/C protocol layer in operative communication with said AV/C transport layer (see Fig.2), said AV/C protocol layer including means for sending AV/C transaction data over more than one

transport (see Fig.5 and col.5, lines 36-51). Takayama does not explicitly teach that there exists a plurality of transport controllers. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to employ a plurality of transport controllers within the A/V transaction delivery system of Takayama because with any device comprising of more than one component, such implementation would increase performance (throughput) and in this case, be able to communicate with a greater number of nodes.

As per claim 2, Takayama teaches of further comprising one or more transport instances associated with said at least one transport controller, wherein said transport controller includes means for indexing said transport instances (see col.7, line 51 to col.8, line 13).

As per claim 3, Takayama teaches of further comprising a transport instance catalog included within said transport layer, said catalog including means for receiving transport instance information from said at least one transport controller (see col.5, lines 36-51 and col.8, lines 31-36).

As per claim 4, Takayama teaches of further comprising a device-to-transport instance index included within said AV/C protocol layer, said device to-transport instance index including means for communicating transport instance information from and to said transport layer (see col.5, lines 36-51; col.9, lines 33-54; and col.12, lines 8-20).

As per claim 11, Takayama teaches a method for receiving AV/C transaction data in an AV/C transaction data delivery system, comprising in combination: receiving

AV/C transaction data from a plurality of transport controllers and associating said data with a link ID (see Fig.7 and col.5, line 63 to col.6, line 3); converting said link ID to a data record and a bus ID (see col.5, lines 36-51); providing said bus ID and said data to a transport layer (see col.4, line 23-31); associating said bus ID with a transport ID (see col.4, lines 23-31); and providing said transport layer ID and data to a protocol layer (see col.7, lines 45-50). Although Takayama does not explicitly teach that the link ID is converted to a data record and bus ID, it is inherent that in order for one device to communicate with the other device, the identification of the connection must be converted or appended to the data, which entails the identification of the bus that is performing the communication. Takayama does not explicitly teach that there exists a plurality of transport controllers. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to employ a plurality of transport controllers within the A/V transaction delivery system method of Takayama because with any device comprising of more than one component, such implementation would increase performance (throughput) and in this case, be able to communicate with a greater number of nodes.

5. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takayama (US 5991842 A) in view of Lawande et al. (US 6219697 B1).

As per claims 12 and 13, Takayama does not teach of further comprising searching by said transport ID for a matching previously sent transport ID and the command associated therewith or associating said data with a particular subunit device

Art Unit: 2155

when said transport ID and a retrievable subunit ID match. Lawande teaches of further comprising searching by said transport ID for a matching previously sent transport ID and the command associated therewith, and associating said data with a particular subunit device when said transport ID and a retrievable subunit ID match (see col.18, lines 8-14 and col.18, line 63 to col.9, line 8). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to employ the teachings of Lawande within the system of Takayama by employing a searching mechanism of a previously sent transport ID by matching it with a transport ID, and command associated therewith within an AV/C transaction data delivery system because this would enable the system as a whole to save time and processing power by eliminating the need to run the switching operation in instances where a connection was lost or time elapsed between prior, same two devices communication.

### ***Response to Arguments***

6. Applicant's arguments filed April 30, 2003, have been fully considered but they are not persuasive. By employing a plurality of a component of a claimed device does not constitute an invention unless it is conveyed within the claims how such implementation changes the functionality of the component and also improves upon the prior art.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Young N Won whose telephone number is 703-605-4241. The examiner can normally be reached on M-Th: 8AM-6PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz R Sheikh can be reached on 703-305-9648. The fax phone numbers for the organization where this application or proceeding is assigned are 703-746-7239 for regular communications and 703-746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
